REQUEST FOR QUOTE · FIRMWARE DEVELOPMENT

IRC380 custom firmware

Expert Mobile Communications is requesting a quote for a custom IRC380 firmware build for the Canadian market. Please price the six items below separately and flag anything not feasible. The work likely spans the device firmware, the iConvNet PoC app and the iConvNet DMR app — the components column shows where we believe each change lands.

01 Requirements

#	REQUIREMENT	WHAT WE NEED AND WHY	COMPONENTS	PRIORITY	COST	LEAD TIME
A	**Unified DMR + PoC channel selector**	DMR channels and PoC groups on one selection path, so one knob turn steps through both — e.g. 1 PoC ch1, 2 DMR Simplex 1, 3 DMR Simplex 2, 4 PoC ch2 — switching mode automatically with no app change. Today crews must leave one app and enter another: unusable while driving.	Firmware, PoC, DMR, iConvNet	Must	—	—
B	**Password on DMR and PoC app settings**	Password prompt before app settings open, in both apps, set and reset remotely from iConvNet — no factory reset, no depot return. Users currently break their own configuration and call us.	PoC, DMR, iConvNet	Must	—	—
C	**Automatic screen lock check box**	A check box in device settings controlling whether the screen locks when it turns off, persisting across reboot. In-vehicle users should not have to unlock the radio to talk.	Firmware	Should	—	—
D	**French / English in the DMR app**	Switching between French and English — voice announcements at minimum, app interface preferred; we supply the Canadian French strings. English-only radios are excluded from Quebec and bilingual public-sector tenders.	DMR, Firmware	Must	—	—
E	**Voice announcements on screened devices**	Announcements on IRC380, S380, TM-7 Plus and similar — channel/group change, mode change, power on, network loss and restore — configurable per device or fleet from iConvNet. Screened models are the ones fitted in vehicles.	Firmware, PoC, DMR, iConvNet	Should	—	—
F	**TM-7 Plus up/down group selection**	Map the up/down buttons to group selection in the mobile app, with voice confirmation. Changing group on the small touch screen while driving is unsafe. Please confirm feasibility.	Firmware, PoC	Should	—	—

Deliverables

- Flashable IRC380 firmware image and updated app builds
- Programming / provisioning tool changes for the new features
- Release notes per item, plus the prompt list for translation

Please also confirm

- Total for items A–F, and for must-have items only
- Warranty / defect-fix period
- Whether the build is exclusive to Expert Mobile
- Whether these features carry forward into future stock firmware

Process

1. **Dealer input — Masum** — Remaining requests gathered via our Connecteam dealer portal.
2. **List finalised** — Requirements locked and sent for pricing.
3. **Quote returned** — Per-item cost, effort, feasibility.
4. **Build, pilot, release** — 2–3 test units, then a short field pilot.

CONTACT
